Chain of polynomials. I have a number N and a positive integer m . I'm going to consider the polynomials $a_i(x) = x^i$, for $i = 0, \dots, m-1$, where $x^0 = 1$ and, for $i > 0$, $x^i = x^{i-1}(x-1)$. I want to know how many values of x are roots of this chain of polynomials. Any ideas on how to study this chain? Thank you in advance! A: They are all roots of $x^m - 1$, which is irreducible. So all of them, exactly m of them, are roots of $x^m - 1$. A reason that the polynomial $x^m - 1$ has m roots is this: note that $(1, 1, \dots, 1)$ is a multiple of the vector $(x-1, x^2-1, \dots, x^m-1)$. Q: show all the rows and next hide first 4 rows of gridview in c# i have a grid view, i am display all the rows of the gridview but my problem is i want to show the next 4 rows and hide the first 4 rows when i click the button. how is it possible. please help A: You can use a LinkButton that will call the procedure which will reverse the position of the rows. Then you just need to assign four buttons to show the row with index 1 to 4.
